

Installation Steps

1 Requirements

Ensure the following are installed:

- Docker **or** Podman
 - Java 17+
 - curl
-

2 Start Backend Service

```
cd backend-service
chmod +x start.sh
./start.sh
```

Choose runtime when prompted:

```
1 → Docker
2 → Podman
```

3 Validate Running Container

If using Docker:

```
docker ps
```

If using Podman:

```
podman ps
```

You should see:

connector_designer_services Up

4 Run CLI Tool

```
cd cli
chmod +x generate-entities.sh
./generate-entities.sh
```

Follow the interactive prompts.

 **Done**

Generated JAR will be located in the folder you selected during the CLI prompts.
